Address Amman, AM 11937

PROFESSIONAL SUMMARY

AI & Data Science graduate experienced in developing intelligent systems using computer vision, NLP, and explainable AI. Skilled in building data-driven models and analytical pipelines for real-world decision support. Interested in applying AI solutions within innovative, technology-driven environments.

EDUCATION

BACHELOR OF SCIENCE (B.S.) IN AI & DATA SCIENCE

— Al Hussein Technical University, Amman
Graduation Year: 2025/2026

Languages

- Arabic (Native)
- English (Advanced)

Technical Skills

- **Programming & Tools:** Python, PySpark, R, Power BI, VS Code, Google Colab.
- **Data Science:** NumPy, Pandas, Scikit-Learn, Data Preprocessing, Visualization.
- **Machine Learning & AI:** NLP (e.g., BERT), Computer Vision (YOLOv8), SHAP, LIME, Supervised Learning, Model Training & Evaluation.

Soft Skills

- Problem-Solving
- Team Collaboration
- Attention to Detail

EXPERIENCE

Tourstify AI/ML Engineer Internship (8 months)

Developed machine learning solutions to enhance customer recommendations and personalized user experiences. Assisted in integrating AI-driven features into real-world workflows, supporting model deployment, performance monitoring, and system optimization.

PROJECTS

Smart PPE Detection System (Computer Vision)

Designed and implemented a real-time computer vision system using YOLOv8 to detect PPE compliance in industrial environments. Implemented data preprocessing, model training, evaluation, and optimization to improve detection performance and support intelligent workplace monitoring.

Smart EV Charging Intelligence Portal (Predictive & Explainable AI)

Designed and implemented an AI-driven decision system for electric vehicle charging operations using predictive analytics, explainable AI techniques (SHAP & LIME), and intelligent automation workflows. Built data preprocessing pipelines and predictive models to support optimized charging decisions and operational efficiency.

NLP Medical Text Classification (Transformers & Embeddings)

Built machine learning and transformer-based models to classify medical text using advanced embedding techniques including TF-IDF, FastText, and BERT. Implemented preprocessing pipelines, model evaluation, and fine-tuning to improve classification performance.

Big Data Logistics Analytics (PySpark)

Performed large-scale data analysis using Python and PySpark to investigate shipment delays, congestion patterns, and operational performance. Applied data preprocessing, aggregation, and analytical modeling techniques to generate insights supporting data-driven logistics decisions.
